-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Aida (JP 05-011525).

Aida discloses cleaning before the belt slips, abstract lines 1-2. An encoder counts slits on the belt, abstract, lines 3-5, which reads on an evaluation of the register of the printer. Aida urges cleaning because of a contamination, for example misregistration caused by dirt. See translation, [0002] (note that "Miss Regis Tracy Yong" is misregistration as spelled out phonetically by the machine translator).

Regarding claim 2, slits (20) are marks from register error is determined.

Regarding claim 3, after reaching a certain level of register error, a cleaning run is started. Abstract, lines 1-2.

Regarding claim 4, multicolor printing is performed and the colors are superimposed, see translation [0017], so the registration evaluation discussed above is performed for each color.

Regarding claim 5, figure 3 shows that the slits are aligned in the transport direction of conveyor belt (5).

Regarding claim 6, figure 1 shows the details of a control device for performing the above method. The term "especially by a fixing aid" shows that contamination is not limited to a fixing aid.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nozaki (JP 2003-241470) disclose determining that soiling on a belt has occurred because of pattern detection signal.

Ueda et al. (JP 2003-195604) disclose detecting scratches (contamination) and removing them from a registration signal.
